

If your employees are working from home.

Social distancing and isolation protocols to prevent the spread of COVID-19 mean many people are now working from home. Employers have an obligation to provide a safe environment to work in - even if that place of work is the employee's own dwelling. Screening protocols to ensure the safety of your workforce must be implemented, and the COVID-19 Response App has automated this process with a simple survey that can be quickly deployed to your home-based workforce, alerting you in real-time of any potential risk.

COVID-19 RESPONSE APP

User submits work from home risk analysis.

Work from home risk analysis surveys can be sent to staff individually, or in bulk. The web-based survey consists of a short, easy to use checklist, with built-in capabilities allowing staff to submit photographs of their home office set up and working environment with their risk analysis.

Your dashboard displays all results in real time, flagging your team members as high - low risk. Enterprise customers can tailor their questionnaire to the needs of their business and employees.

Low risk score

Risk analysis submission is approved automatically.

Medium to high risk score

Dashboard alerts management and recommends investigation.

Necessary changes implemented

Adjustments are implemented to the work space in accordance with management findings and discussions.

Management investigates

Manager works to determine risk profile and discusses options to facilitate a safer work environment for the employee.

Employee commences work

The worker/user notified that they are cleared to attend work.

PERIODIC REMINDERS

Reminders can be automated and sent to the employee via email or SMS to check in and ensure their safety. If no response is received, management is alerted and can investigate.
